

DIGITAL ADVANTAGE

XanEdu To Go

Email in Outlook. Grades in Jenzabar. Online courses in Blackboard. And on and on...

It may be wishful thinking to imagine a world in which you aren't forced to jump back and forth between different systems to manage your courses. Even a world in which they can simply "talk" to one another.

XanEdu brings you one step closer to making that wish a reality.

"Course management systems have become ubiquitous on our campuses..."

— *Educause Evolving Technologies Committee Report*

The latest innovation from the leader

in digital course pack delivery, XanEdu To Go allows CoursePacks to be placed into one of the many approved password-protected online environment. That means your CoursePack can be "embedded" into any Blackboard course, and even courses hosted in open-source CM systems.

With XanEdu To Go, your students can access their CoursePack articles and content without ever leaving the environment of their online course. No jumping back and forth. It's easy and convenient for them, which means fewer questions and complications for you.

XanEdu To Go further enhances the control and customization you've come to expect from XanEdu Coursepacks, with unique features including:

-  XanEdu Timer function allows you to make specific CoursePack content inaccessible until a date and time of your choice.
-  Smart Export function allows the entire CoursePack to be inserted with one keystroke, or individual readings placed exactly where you want within the online course.
-  Works with your traditional method of CoursePack purchase, including directly from your University bookstore.

And whether you "do it yourself," or rely upon your XanEdu account team to assemble your CoursePack, it makes no difference—XanEdu To Go seamlessly incorporates your chosen content into Blackboard or other CMS online courses.

XanEdu To Go — now your digital CoursePack can "talk" to your CMS, and it's never sounded better!
